

MamaKind UX Audit Report

Site: <https://mamakindapp.com>

Date: 2026-06-08

Build: v4.4.22 · b521173

Auditor: Automated UX Audit

Summary

Severity	Count
☐ Critical	3
☐ Medium	6
☐ Minor	7
Total	16

The site is well-built overall — clean design, solid navigation, proper accessibility basics, and good responsive behavior. The **dominant issue** is broken Amazon product images (93% failure rate on the Products page) and incorrect Amazon affiliate links (wrong ASINs mapping to wrong products). These are critical because they directly impact trust and revenue.

☐ Critical Issues

1. Massive Broken Product Images (71 of 76 on /products)

Pages affected: `/products` , `/breastfeeding-safe-products` , `/ttc-safe-products` , `/pregnancy-safe-products` , `/ingredients/*` , `/products/*` (detail pages), curated list pages

Description: 93% of product images fail to load. All images are hotlinked from Amazon's CDN (`m.media-amazon.com`). Amazon frequently rotates image URLs, causing 404 errors. Only 5 of 76 product images currently load on the Products page.

Console errors (examples): - `https://m.media-amazon.com/images/I/61DVN+YWy0L._AC_SX522_.jpg` → 404 - `https://m.media-amazon.com/images/I/61S7BrCBjUL._AC_SX522_.jpg` → 404 - `https://m.media-amazon.com/images/I/`

71vN7c+LtUL._AC_SX522_.jpg → 404 - https://m.media-amazon.com/images/P/B000JVCBBG.01._SL500_.jpg → 404 - And 67 more...

Impact: Users see broken image placeholders for nearly every product. This severely undermines trust for a site that relies on product recommendations.

Recommendation: - Self-host product images or use a CDN proxy with fallback - Implement a scheduled job to check image URLs and refresh them - Add a fallback/placeholder image for broken loads via `onerror` handler

2. Wrong Amazon Affiliate Links (ASIN Mismatches)

Page affected: `/products`

Description: Multiple different products link to the same Amazon ASIN, meaning users clicking "View on Amazon" are sent to the **wrong product page**. This is a revenue and trust issue.

Duplicate ASINs found: | ASIN | Products Using It (All Different Products) |

|-----|-----| | B08QX1YK6D | Cetaphil Daily Hydrating Lotion SPF 15, Neutrogena Hydro Boost Day Gel-Cream, Neutrogena Hydro Boost Eye Gel-Cream, Neutrogena Hydro Boost Night Gel-Cream, Neutrogena Sheer Zinc SPF 50 Sunscreen | | B01H06YZ1G | Fertility Friend BBT Thermometer, Pre-Seed Fertility Lubricant, Clearblue Advanced Ovulation Test, Easy@Home Ovulation Strips, First Response Pregnancy Test | | B01KIQH2VU | Leachco Snoogle Pillow, PharMeDoc C-Shape Pillow, Queen Rose Wedge Pillow | | B0BNP3Y6CT | Bamboobies Nursing Pillow, Boppy Pregnancy Pillow | | B00BLA3EPQ | Lansinoh HPA Lanolin Nipple Cream, Mustela Stretch Marks Cream, The Honest Company Belly Balm | | B0843XGN3H | CeraVe Eye Repair Cream, CeraVe Hydrating Facial Cleanser, CeraVe Hydrating Hyaluronic Acid Serum | | B07PP38QDY | ATTITUDE Pregnancy Body Lotion, ATTITUDE Pregnancy Shampoo, The Inkey List Niacinamide Serum | | B09CFBW8NY | Traditional Medicinals Mother's Milk Tea, Milkmakers Lactation Cookie Bites | | B00550AUA6 | Gin Gins Ginger Candy, Three Lollies Peggie Pop Drops | | B005EF0I7Q | Burt's Bees Mama Bee Belly Butter, Burt's Bees Mama Bee Body Oil |

Impact: Users clicking affiliate links are redirected to incorrect products. This causes confusion, lost sales, and potential Amazon Associates policy violations.

Recommendation: Audit every product's Amazon ASIN and correct the links. Each product must have its own unique, correct ASIN.

3. Hub Page Images Returning 404s

Pages affected: `/breastfeeding-safe-products` , `/ttc-safe-products`

Description: The stage hub pages load broken Amazon images, producing multiple console 404 errors. The `/pregnancy-safe-products` page is cleaner but still affected on product cards.

Impact: Key landing pages for the three main user segments show broken images, hurting first impressions.

☐ Medium Issues

4. Contact Page Has No Contact Form

Page: `/contact`

Description: The contact page only shows an email link (`support@mamakindapp.com`) and a mailing address. There is no contact form, which is the expected UX pattern for most websites.

Impact: Users expecting to fill out a form may bounce. Some users may not have an email client configured.

Recommendation: Add a simple contact form (name, email, message) that sends to the support inbox. Keep the email link as an alternative.

5. Newsletter Email Signup — No Success State Visible

Page: `/` (homepage, bottom section)

Description: The newsletter signup form validates empty/invalid email correctly (shows "Please enter a valid email address"). However, after valid submission, there's no clear visual confirmation state observable in the DOM. The experience after submitting a valid email should provide obvious positive feedback.

Recommendation: Ensure a clear "Thank you! You're subscribed." message replaces or appears near the form after successful submission.

6. Preloaded Font Not Used

Pages affected: All pages (observed on 404 page, likely site-wide)

Console warning: The resource `https://mamakindapp.com/_next/static/media/5fbf91cac4d9174b-s.p.0h.mz599u2a38.woff2` was preloaded using link preload but not used within a few seconds from the window's load event.

Impact: Unnecessary network request, minor performance hit. Browsers flag this as a warning.

Recommendation: Either use the font or remove the preload hint from the `<head>` .

7. Products Filter — "Refine by Type" Has Too Many Options

Page: `/products`

Description: The "Refine by type" filter section lists 30+ subcategories (Cream, Day Cream, Serum, Eye Cream, Night Cream, Stretch Mark Care, Nausea Relief, Pregnancy Pillow, etc.),

many with only 1-2 items. This creates an overwhelming filter experience.

Impact: Users face decision paralysis with too many low-count filter options.

Recommendation: Consider grouping related types (e.g., "Creams & Moisturizers" instead of separate Cream, Day Cream, Night Cream) or hiding types with ≤ 2 items behind a "Show more" toggle.

8. Check a Product Page — No Loading Indicator Context

Page: /check

Description: When a product is searched, results appear but there's no visible loading spinner or "Searching..." state during the lookup. For products that require AI-assisted analysis (non-catalog matches), this delay could be confusing.

Recommendation: Add a loading skeleton or spinner between form submission and result display, especially for non-catalog lookups.

9. Build Version Exposed in Footer

Pages affected: All pages

Description: The footer displays `Build v4.4.22 · b521173` (version number and git commit hash) on every page.

Impact: Exposes internal build information to all users. While not a security vulnerability per se, it's unnecessary for end users and could aid targeted attacks if vulnerabilities are found in specific versions.

Recommendation: Remove or hide build info from production footer, or restrict to admin/dev views only.

☐ Minor Issues

10. Curated Lists — No "Back to Top" Button on Long Pages

Pages affected: /products , /pregnancy-safe-products , other long-scroll pages

Description: Product listing and hub pages are very long (76+ products). There's no "back to top" button or sticky navigation to help users navigate.

Recommendation: Add a floating "back to top" button that appears after scrolling past the first viewport.

11. Mobile Hamburger Menu — No Visual Close Indicator

Page: All pages at 375px width

Description: The mobile navigation uses a hamburger (☰) icon. While it works correctly, the open/close state could be more obvious (e.g., animate to an X when open).

Recommendation: Consider a hamburger-to-X animation for clearer state communication.

12. Homepage — Dense Content Structure

Page: /

Description: The homepage is content-rich with many sections: Hero → How It Works → Curated Lists → Check a Product → Methodology → TTC → Browse by Category → Popular Guides → Quick Guides → Newsletter → About → Contact. While comprehensive, it may be overwhelming for first-time visitors.

Recommendation: Consider a more focused above-the-fold experience with progressive disclosure. A sticky section nav could help users jump to relevant sections.

13. Consistent Card Design for Product Categories

Page: /products

Description: Product categories use emoji prefixes (👉 👉 👉 👉 👉) as section headers, which is informal. The visual hierarchy between categories could be stronger.

Recommendation: Consider styled category headers with icons instead of emoji for a more polished look.

14. Footer "Cookie Preferences" Button — Duplicated

Pages affected: All pages

Description: The "Cookie preferences" button appears twice in the footer — once in the "Legal" section and once in the bottom bar. This is slightly redundant.

Recommendation: Keep only one instance, preferably in the bottom bar alongside Privacy/Terms links.

15. Product Detail Pages — No Breadcrumb Navigation

Pages affected: /products/cerave-moisturizing-cream and other product detail pages

Description: Individual product pages lack breadcrumb navigation to help users understand where they are in the site hierarchy and navigate back to the products list or relevant category.

Recommendation: Add breadcrumbs like: Home > Products > Cosmetics & Skincare > CeraVe Moisturizing Cream

16. Blog Posts — No Reading Progress Indicator

Pages affected: All blog posts (e.g., `/blog/best-prenatal-vitamins-canada`)

Description: Blog posts show estimated reading time (e.g., "7 min read") but no reading progress bar, which is a common UX pattern for long-form content.

Recommendation: Consider adding a subtle progress bar at the top of blog posts.

☐ What Works Well

- **Navigation:** Clean, consistent 6-item nav across all pages. Mobile hamburger works correctly. All nav links functional.
- **404 Page:** Properly branded with full navigation and footer. Clear "404 / This page could not be found" messaging.
- **Responsive Design:** Tested at 375px (mobile), 768px (tablet), and 1280px (desktop). Layout adapts well at all breakpoints with no layout breakage observed.
- **Accessibility Basics:**
 - ☐ Skip to main content link present
 - ☐ Proper heading hierarchy (H1 → H2 → H3 → H4) on all pages tested
 - ☐ All images have alt text (0 missing on tested pages)
 - ☐ Form inputs have proper labels and placeholders
 - ☐ All external links use `rel="noopener"` (76/76 on Products page)
 - ☐ ARIA roles used appropriately (landmarks, regions, alerts)
- **Form Validation:** Check a Product form validates empty submissions with clear error message. Email signup validates invalid emails properly.
- **Check a Product Feature:** Works correctly — returns product match with safety rating, summary, and flagged ingredients.
- **Interactive Elements:** Search tips `<details>` expandable works. Filter checkboxes on Products page work. Cookie consent banner is functional.
- **Analytics Consent:** GDPR-style consent banner with Accept/Decline options. Links to privacy policy. Non-intrusive.
- **Content Quality:** Well-written, authoritative content with proper disclaimers, source citations, and "not medical advice" warnings throughout.
- **No JavaScript Errors:** Zero JS runtime errors across all pages. Only console errors are the Amazon image 404s.

- **Performance:** Pages load quickly. No noticeably slow elements. Next.js framework provides good performance baseline.
- **SEO:** Proper page titles, meta descriptions (inferred from Next.js structure), semantic HTML, and proper heading structure.

Pages Audited

Page	URL	Status	Console Errors
Homepage	/	☐ Clean	None

Responsive Testing Summary

Breakpoint	Width	Result
Mobile	375px	✅ Good — hamburger menu, single column, readable text
Tablet	768px	✅ Good — nav wraps nicely, content uses available space
Desktop	1280px	✅ Good — full nav bar, multi-column layouts, sidebar filters

Priority Recommendations

1. ☐ **URGENT:** Fix Amazon product image URLs or self-host images with a fallback system
2. ☐ **URGENT:** Audit and correct all Amazon affiliate ASINs — many products link to wrong items
3. ☐ **IMPORTANT:** Add a contact form to the Contact page
4. ☐ **IMPORTANT:** Remove build version from public footer
5. ☐ **NICE-TO-HAVE:** Add breadcrumbs, back-to-top button, and loading states for polish
